

Grass cutting in village

I have spoken to John regarding the possibility of collecting the grass cuttings at Horse River Green, the Play Area and Fag End.

As requested John has investigated the cost of a grass collector box for the mower and considered what additional time collecting the grass cuttings would take.

The cost of a powered grass collector is £434 (including vat).

For every 2.5 hours John currently takes cutting the grass, he estimates that this would increase to 3 hours if asked to collect the cuttings. He would also need to make 2 journeys to each site as he would not be able to fit both the mower and collector box in his trailer at the same time. (This might pose problems for our insurance cover – who would be looking after the mower whilst he returned home for the grass collecting box)

Before deciding to go down this route however there is one issue which must first be addressed - how do we dispose of the grass cuttings?
